cv

Apply the cv layout to the document. Sets up a header for the front page. Additional sections should be created using other functions, such as `exp` and `edu`.

Parameters

```
cv(
  author: content,
  address: str content,
  contacts: array,
  updated: datetime str,
  body: content
) -> content
```

author `content`

The person to be listed at the top of the CV. This is probably where your name goes.

Default: ""

address `str` or `content`

Your address, preferably in two-line format.

Default: ""

contacts `array`

A list of contact information. Email, GitHub, and LinkedIn are all good things to put here.

Default: ()

updated `datetime` or `str`

Date updated.

Default: `datetime.today()`

body `content`

The content of the cv.

edu

Create an education entry, suitable for one degree and accompanying information.

Parameters

```
edu(  
  institution: str content ,  
  date: str datetime ,  
  degrees: array ,  
  location: str content ,  
  gpa: str content ,  
  details: str content  
) -> content
```

institution `str` or `content`

Degree-granting institution.

Default: ""

date `str` or `datetime`

Date of graduation / attaining degree.

Default: ""

degrees `array`

Degrees obtained. Majors are traditionally listed directly with the degree type. Minors might be listed as an additional entry in the array: ([Degree], [Minor: Basketweaving])

Default: ()

location `str` or `content`

Location of institution.

Default: ""

gpa `str` or `content`

(optional) GPA and additional honors.

Default: ""

details `str` or `content`

(optional) Additional details.

Default: ""

exp

Create an entry detailing work experience.

Parameters

```
exp(  
  role: str,  
  org: str,  
  start: datetime str none,  
  end: datetime str none,  
  location: str,  
  summary: str none,  
  details: content none  
) -> content
```

role `str`

Role at the organization.

Default: ""

org `str`

Organization that the work took place at.

Default: ""

start `datetime` or `str` or `none`

Start date of employment.

Default: ""

end `datetime` or `str` or `none`

End date of employment.

Default: ""

location `str`

Location that the work took place at. List where you actually worked, rather than where the company's main office might be.

Default: ""

summary `str` or `none`

One-sentence summary of the work.

Default: ""

details `content` or `none`

Detailed description of the work, traditionally in bullet points.

Default: []

ser

Create an entry detailing service to the field.

Parameters

```
ser(  
    role: str,  
    org: str or none,  
    start: datetime or str or none,  
    end: datetime or str or none,  
    summary: str or none  
) -> content
```

role `str`

Role in which you served.

Default: ""

org `str` or `none`

Organization that the service was done with.

Default: ""

start `datetime` or `str` or `none`

Start date of work.

Default: ""

end datetime or str or none

End date of work.

Default: ""

summary str or none

One-sentence summary of work.

Default: none

award

Creates an entry for an award, such as a scholarship or fellowship.

Parameters

```
award(  
    name: content str none ,  
    date: datetime str none ,  
    from: content str none ,  
    amt: content str int none ,  
    details: content str none  
) -> content
```

name content or str or none

The name of the award. If it is a specific grant, the identifier can also go here.

Default: ""

date datetime or str or none

Date the award was given.

Default: ""

from content or str or none

Institution that granted the award.

Default: ""

amt content or str or int or none

(optional) Amount of the award.

Default: ""

details `content` or `str` or `none`

(optional) Detailed description of the award.

Default: ""

skills

Skills section formatting, responsible for collapsing individual entries into a single list.

Parameters

```
skills(areas: array(str, array) ) -> content
```

areas `array(str, array)`

A list of skills in a particular area.

abstract

Create a publications entry for a conference abstract.

Parameters

```
abstract(  
  authors: array str,  
  title: str content,  
  conference: str content,  
  number: str int content,  
  pages: int str content none,  
  date: datetime str,  
  kind: str content none,  
  location: str content none,  
  DOI: str content none  
) -> content
```

authors `array` or `str`

List of authors in order.

Default: ()

title `str` or `content`

Title of the abstract.

Default: ""

conference `str` or `content`

Conference that the abstract was presented in/submitted to.

Default: ""

number `str` or `int` or `content`

(optional) Submission number for the abstract.

Default: ""

pages `int` or `str` or `content` or `none`

(optional) Page number in the abstract booklet. Omit if the book was not paginated or if the abstract repository was entirely digital.

Default: ""

date `datetime` or `str`

Date the abstract was presented.

Default: ""

kind `str` or `content` or `none`

Kind of presentation that the abstract was used for.

Default: ""

location `str` or `content` or `none`

Location of the conference. Format as City State, Country.

Default: ""

DOI `str` or `content` or `none`

(optional) Digital Object Identifier for the abstract.

Default: `none`

paper

Create a publications entry for a peer-reviewed paper.

Parameters

```
paper(  
  authors: array str ,  
  title: str content ,  
  journal: str content none , ,  
  published: datetime str content none ,  
  vol: str content none ,  
  issue: str content none ,  
  pages: str content none ,  
  DOI: str content none ,  
  show-link: bool  
) -> content
```

authors array or str

List of authors in order.

Default: ()

title str or content

Title of the abstract.

Default: ""

journal str or content or none ,

Journal that the paper was published in.

Default: none

published datetime or str or content or none

Date of publication.

Default: ""

vol str or content or none

(optional) Volume of the journal.

Default: none

issue str or content or none

(optional) Issue of the journal.

Default: none

pages `str` or `content` or `none`

(optional) Page range of publication in journal.

Default: `none`

DOI `str` or `content` or `none`

(optional) Digital Object Identifier for publication.

Default: `none`

show-link `bool`

Whether or not to show the DOI

Default: `false`

preprint

Create an entry detailing a preprinted (non-peer-reviewed) manuscript.

Parameters

```
preprint(  
  authors: array str ,  
  title: str content ,  
  journal: str content none ,  
  published: datetime str content none ,  
  status: str none ,  
  DOI: str content none  
) -> content
```

authors `array` or `str`

List of authors in order.

Default: `()`

title `str` or `content`

Title of the abstract.

Default: `" "`

journal `str` or `content` or `none`,

Preprint archive that the manuscript was published in.

Default: `" "`

published `datetime` or `str` or `content` or `none`

Date of publication.

Default: ""

status `str` or `none`

(optional) Status of the manuscript. Traditionally listed as “submitted” or “in revisions”, depending on progress.

Default: `none`

DOI `str` or `content` or `none`

(optional) Digital Object Identifier for publication.

Default: `none`

pres

Create an entry for a conference presentation.

Parameters

```
pres(  
    authors: array str,  
    title: str content,  
    conference: str content,  
    number: str int content,  
    pages: int str content none,  
    date: datetime str,  
    kind: str content none,  
    location: str content none,  
    DOI: str content none  
) -> content
```

authors `array` or `str`

List of authors in order.

Default: ()

title `str` or `content`

Title of the abstract.

Default: ""

conference `str` or `content`

Conference that the abstract was presented in/submitted to.

Default: ""

number `str` or `int` or `content`

(optional) Submission number for the abstract.

Default: ""

pages `int` or `str` or `content` or `none`

(optional) Page number in the abstract booklet. Omit if the book was not paginated or if the abstract repository was entirely digital.

Default: ""

date `datetime` or `str`

Date the abstract was presented.

Default: ""

kind `str` or `content` or `none`

Kind of presentation that the abstract was used for.

Default: ""

location `str` or `content` or `none`

Location of the conference. Format as City State, Country.

Default: ""

DOI `str` or `content` or `none`

(optional) Digital Object Identifier for the abstract.

Default: `none`

hide

Allows hiding or showing full resume dynamically using global variable. This can be helpful for creating a single document that can be rendered differently depending on the desired output, for cases where you'd like to simultaneously render both a full copy and a single-page instance of only the most important or vital information.

Parameters

```
hide(  
  should-hide: bool,  
  content: content  
) -> content
```

should-hide bool

Whether or not to hide the content.

content content

Content to be hidden

proj

Create an entry documenting a research project. Styled after the Goldwater CV entries, which record:

- Manner of access
- Project significance
- Skills obtained

Parameters

```
proj(  
  title: str content none,  
  advisors: array,  
  institution,  
  start: datetime str none,  
  end: datetime str none,  
  time: datetime str none,  
  access: content str none,  
  significance: content str none,  
  skills: content str none  
) -> content
```

title str or content or none

Title of the project.

Default: ""

advisors array

Advisors, such as faculty or graduate students, who mentored you on the project.

Default: ()

institution

Institution where the project took place.

Default: ""

start datetime or str or none

Start date of the project.

Default: ""

end datetime or str or none

End date of the project.

Default: ""

time datetime or str or none

End date of the project.

Default: ""

access content or str or none

Manner of access to the project.

Default: []

significance content or str or none

Significance of the project.

Default: []

skills content or str or none

Skills learned through the project.

Default: []
